## THE GRAYWATER FACTS

Graywater is the water collected from your shower, bath and washing machine.

Graywater is filtered and used to irrigate your garden, every day, even during water restrictions.

An average family of four can generate up to 40,000 gallons of graywater annually.

Graywater systems can be used without a permit, but must comply with local legislation.

A graywater system should always be installed by a plumber, using graywater best practices.

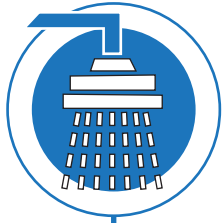

## 5 REASONS TO INSTALL A GRAYWATER SYSTEM NOW

- 1 Keep your garden green during drought and water restrictions
- 2 Reduce your water bill
- 3 Reduce the load on your septic system
- 4 Works with existing plumbing and drip irrigation system
- 5 Easy to install and easy to clean

### Step 1 Collect

Graywater is collected from your shower, bath, and washing machine

# how it works

### Step 2 Filter

Lint and other impurities are intercepted, and the graywater is filtered through a progressive filtration technology without using any chemicals.

Aqua2use GWDD shown

### Step 3 Flourish

The filtered water is immediately and automatically pumped via dripper irrigation to areas of your garden.
